KAMMY ENGELHART

kengelhart@sei.com | sei.com

PROFESSIONAL BACKGROUND

Kammy has over 25 years of information systems experience in project planning, design, development, testing, and implementation. She has experience in all phases of the Ssystems development lifecycle from the generation of user requirements through user acceptance. She is equally comfortable interfacing with both technical personnel and business users. This ability allows her to translate the needs of the business into actionable effort for technical teams.

Her strong interpersonal and analytical skills along with her ability to quickly understand business processes enable her to rapidly become an asset to any project team.

SELECTION OF RELEVANT EXPERIENCE

Data Analyst/Reporting Analyst for a Genetic Testing Provider

In two separate engagements, Kammy served as a member of the Data and Analytics team providing Business Intelligence information to support various business areas of a genetic testing provider. Her first engagement focused primarily in support of the Finance and Billing areas where she worked to understand business requirements and to translate them to Qlikview reports. In addition, she also functioned as a data analyst to understand billing and revenue recognition information through examination of data within transactional and data warehouse sources.

in her second engagement, she was responsible for the analytics needs of two Customer Service groups. In addition to supporting their reporting needs in their existing SQL Server/Qlikview environment, Kammy was also responsible for requirements gathering, planning and implementing updated Snowflake/Looker reporting for these groups as part of a larger effort to transition the overall Data and Analytics processes to this updated platform.

Scrum Master/Product Owner for a Fortune 25 Grocery Retailer

Kammy served as a combination Scrum Master and Product Owner for an effort to develop a platform to allow the movement of various data sets to the client's Azure cloud instance. The goal of this effort is to provide a metadata driven approach to allow for additional sources to be brought on quickly and with a minimum of intervention by the project teams requesting the move of their data to Azure. Kammy was responsible for working with the project team and various stakeholders during backlog grooming, period planning, facilitating stand-ups and reporting up to senior management as a part of driving the various components of the overall Data Management Platform.

Industry Experience

- Health Care
- Insurance
- IT Services
- Retail
- Financial Services
- Manufacturing

Functional Expertise

- Healthcare Systems
- Business Intelligence
- Finance and Billing
- Sales and Marketing Systems
- Retail Systems
- Customer Relationship Management

SELECTION OF RELEVANT EXPERIENCE

Business Analyst/Product Owner, Point of Sale Host for a Fortune 25 Grocery Retailer

Kammy served as a business analyst/product owner for the replacement of the centralized system that feeds the POS and store support systems for over 2000 stores. The current system, which receives input from multiple pricing and item information sources, is a custom solution developed on a mainframe platform. In order to support future growth and anticipated acquisitions, a more modern solution is being developed utilizing Hadoop and big data methodologies. Kammy was responsible for interfacing with multiple business and technical teams to elicit requirements, detail data sourcing and specify output data.

Project Manager, Point of Sale System for a Major Eye Care Company

Kammy served as a project manager for several work streams for a new retail point of sale system. This initiative allowed the client to move away from an in-house developed solution with embedded non-POS functionality to an off-the-shelf configurable solution with external supporting systems. This solution was deployed to over 1200 US retail locations in addition to multiple locations throughout Canada, the UK and the rest of Europe. Kammy coordinated the efforts of various internal and external teams for the development and eventual deployment of solutions for areas such as managing associate hiring and termination, associate timekeeping through Kronos and commissions. Her responsibilities included creating executive level status, project and resource planning and management of third-party vendors

Data/Business Analyst, Executive Reporting for a Large Financial Services Firm

Kammy worked with the HR organization within the world's leading provider of services to institutional investors to provide compensation information used in presentations for senior management. This involved understanding the business reporting requirements in order to combine data from a variety of sources to generate year-end compensation reports. These presentations were then used by the CEO and Management committee members to review/revise compensation decisions.

Reporting Architect, Executive Reporting System for a Large Financial Services Firm

Kammy worked in the Corporate Systems and Operations (CSO) organization within the world's leading provider of services to institutional investors providing design, development and training using Cognos Reporting tools. These efforts involved interfacing directly with business users, internal and off-shore IT resources. In addition to providing design and development services, she also provided mentoring to both IT and business personnel in Cognos Connection and Report Studio.

Technology Expertise

- Microsoft Office Suite
- Snowflake | SQL Server | Oracle | DB2 | PL/SQL
- Informatica
- Tableau | Looker | Qlik | Microsoft Power BI | Cognos Analytics
